SUMMARY

Full Stack Developer with 3 years of experience in designing and developing scalable web and mobile applications. Skilled in building robust front-end interfaces using React.js, React Native, and Material-UI, alongside backend expertise in Node.js, Firebase, and Supabase. Proficient in integrating RESTful APIs, managing databases, and implementing authentication and role-based access systems. Strong focus on performance optimization, responsive design, and delivering end-to-end solutions. Adept in Agile methodologies, cross-team collaboration, and modern software development practices.

TECHNICAL SKILLS

- React JS
- MongoDB
- Tailwind CSS
- React Native
- Supabase
- Material UI
- Next JS
- Firebase
- Shadcn
- HTML & CSS
- JavaScript

PROFESSIONAL EXPERIENCE

Software Engineer | Zelarsoft Pvt Ltd, Hyderabad

OCT 2022 - Present

Led full stack development for large-scale health-tech and e-commerce projects. Worked extensively on React.js, React Native, Firebase, and role-based access systems.

Key Achievements:

- Hands-on experience in building **end-to-end web and mobile applications** using **React.js, React Native, Node.js, Firebase, and Supabase.**

- Proficient in React.js with a solid understanding of its core features, reusable component design (ES6+), and performance optimization techniques.
- Developed and maintained **RESTful APIs and serverless functions** using **Node.js** and **Firebase Cloud Functions**, enabling secure and scalable backend logic.
- Implemented **authentication & authorization systems** (Firebase Auth, role-based access control, Google OAuth) for secure user management.
- Designed and optimized **database schemas** using **Firestore, Supabase, and MySQL**, ensuring efficient queries and real-time data handling.
- Experienced in **Redux and React Query** for state management and caching, ensuring seamless data flow across frontend and backend.
- Built **responsive, cross-platform UIs** using CSS3, SASS, Tailwind, Material UI, and Media Queries, delivering consistent experiences across devices.
- Developed **mobile apps with React Native**, integrating backend APIs, Firebase storage, and real-time chat for native-like performance on iOS and Android.
- Worked with **third-party APIs** (Google Calendar, Microsoft Graph, SMTP, etc.) for real-time integration and workflow automation.
- Implemented **file upload, dashboards, and reporting modules**, integrating **Recharts** for data visualization and analytics.

PROJECT

1. REVIEW DEALS

Technologies: React, React Native Supabase, Google Authentication, CSS, Flexbox, Gmail API (for data fetching)

- Developed a responsive e-commerce app with React and Supabase, integrating Google Authentication and Gmail-based data filtering.
- Built dynamic UI components including navbar, card grids, and collapsible tables for improved product browsing and status tracking.
- Designed a stepper-style checkout flow and a responsive profile page to enhance user experience across devices.
- Implemented MakeMyTrip-inspired left-pane filters and added features like selected item display, ticket views, and user popups.

- Improved layout responsiveness and usability through optimized CSS and flexbox techniques.

2. MINDLY

Technologies: React, React Native, Firebase, Material UI, JavaScript, CSS

- Designed and developed responsive, cross-platform UI from scratch using React.js, React Native, Material-UI, Bootstrap, and CSS/SASS, ensuring consistency across web, tablet and mobile.
- Built and maintained **backend logic** using **Node.js** and **Firebase Cloud Functions**, supporting real-time communication and secure data flows.
- Integrated **Firebase (Authentication, Firestore, Storage)** for authentication, file storage, and real-time database operations.
- Implemented **group and one-on-one chat features** for doctors, schools, and parents using Firebase real-time messaging.
- Developed **notifications system** (real-time & scheduled) to keep users updated on appointments, chat messages, and role-specific activities.
- Developed **secure onboarding** with email verification, invite link workflows, and role-based user registration also pre-registered users.
- Created **file upload features** across both React.js and React Native, with optimized storage and retrieval.
- Integrated **Google Calendar & Microsoft Graph APIs** for doctor availability and patient scheduling.
- Added **payment processing** with **Lago and Stripe**, enabling subscription management, invoicing, and secure transactions.
- Developed **dashboards and analytics** using **Recharts**, providing real-time visualization of patient progress and engagement.
- Managed **multi-role access** (Super Admin, Organization Admin, School Admin, Teacher, Student, Doctor, Patient) with a custom **Access Control Mechanism (ACM)**.
- Implemented **multi-role management**, allowing a single user to act in multiple roles (e.g., Teacher to School Admin vice versa) with seamless switching.
- Optimized data fetching with **React Query** and **caching strategies**, reducing redundant API calls and improving app performance.
- Implemented **classroom creation features**, loaders, and active session tracking for monitoring and reporting.
- Built a **custom navigation system in React Native** for seamless transitions between profiles,

chats, and logs.

Ensured **feature parity** across platforms by replicating all web functionality in the React Native mobile app.

3. INSIDE-VIEW

Technologies:Next.js, Supabase, JavaScript, CSS

- Developed an admin and customer portal for Canadian utility billing (water, gas, thermal) using Next.js and Supabase.
- Implemented secure user authentication and managed login/logout flows via Supabase.
- Created customer enrollment forms with email confirmations and an admin approval workflow that triggers notifications.
- Enabled users to set login credentials post-approval for secure account access.
- Designed a customer dashboard displaying bills, payments, and pre-authorization forms with service disconnect options.
- Built an admin panel to manage customers, including payment processing, password resets, and service status tracking.
- Integrated automated email APIs to streamline communication during customer and admin interactions.

EDUCATION

Master of Science (MSC) in Physics Jul 2020 – May 2022

Sri Padmavathi Mahila University, Tirupathi

BACHELOR of Science (B.SC) in Physics Jun 2017 – May 2020

Jagan's Degree & PG college, Nellore
